University of Chicago Press *"A compelling read" that reveals how maps became informational tools charting everything from epidemics to slavery (Journal of American History). In the nineteenth century, Americans began to use maps in radically new ways. For the first time, medical men mapped diseases to understand and prevent epidemics, natural scientists mapped climate and rainfall to uncover weather patterns, educators mapped the past to foster national loyalty among students, and Northerners mapped slavery to assess the power of the South. After the Civil War, federal agencies*

embraced statistical and thematic mapping in order to profile the ethnic, racial, economic, moral, and physical attributes of a reunified nation. By the end of the century, Congress had authorized a national archive of maps, an explicit recognition that old maps were not relics to be discarded but unique records of the nation's past. All of these experiments involved the realization that maps were not just illustrations of data, but visual tools that were uniquely equipped to convey complex ideas and information. In *Mapping the Nation*, Susan Schulten charts how maps of epidemic disease, slavery, census statistics, the environment, and the past demonstrated the analytical potential of cartography, and in the process transformed the very meaning of a map. Today, statistical and thematic maps are so ubiquitous that we take for granted that data will be arranged cartographically. Whether for urban planning, public health, marketing, or political strategy, maps have become everyday tools of social organization, governance, and economics. The world we inhabit—saturated with maps and graphic information—grew out of this sea change in spatial thought and representation in the nineteenth century, when Americans learned to see themselves and their nation in new dimensions.

Elvis Presley Boulevard From Sea to Shining Sea, Almost Open Road + Grove/Atlantic A memoir of a cross-country road trip, the tourist experience, and the cultural touchstones that bring Americans together: "A great story" (*Publishers Weekly*). As a boy in Ohio, Mark Winegardner spent the formative summers of his wonder years touring the States with his family in a succession of recreational vehicles. Much later, only months before his wedding, he undertakes another transcontinental odyssey—this time without benefit of license-plate games with his sister or parental warnings to get his feet out of the car window. He arms himself with only the bare essentials: a Styrofoam cooler; a Hawaiian shirt; enough cash for gas, blue plate specials, and the occasional knickknack; a buddy; and the buddy's ailing '68 Chevy Impala. Determined to extract full value from every scenic overlook, these two set out to discover America. They visit Xanadu, Foam House of Tomorrow, in Gatlinburg, Tennessee; and Truth or Consequences, New Mexico, the only community named after a game show. They play the Easter Island Hole at Magic Carpet Golf in Tucson. They marvel at the fourteen peacocks strolling Graceland's lawn and at the vastness of the prairie states, "where no one speaks French or pays to park." They collect 3-D glasses. They eat Devil Dogs. They take the amazing Miracle Photo. They discover themselves. Most amazing of all, they discover an unbroken chain of Elvis tapestries, Elvis ashtrays, Elvis T-shirt wearers, and Elvis imitators that unites this land as surely as Route 66 divides it.

Dominion from Sea to Sea Pacific Ascendancy and American Power Yale University Press America is the first world power to inhabit an immense land mass open at both ends to the world's two largest oceans—the Atlantic and the Pacific. This gives America a great competitive advantage often overlooked by Atlanticists, whose focus remains overwhelmingly fixed on America's relationship with Europe. Bruce Cumings challenges the Atlanticist perspective in this innovative new history, arguing that relations with Asia influenced our history greatly. Cumings chronicles how the movement westward, from the Middle West to the Pacific, has shaped America's industrial, technological, military, and global rise to power. He unites domestic and international history, international relations, and political economy to demonstrate how technological change and sharp economic

growth have created a truly bicoastal national economy that has led the world for more than a century. Cumings emphasizes the importance of American encounters with Mexico, the Philippines, and the nations of East Asia. The result is a wonderfully integrative history that advances a strong argument for a dual approach to American history incorporating both Atlanticist and Pacificist perspectives. **Best Books for Children Preschool Through Grade 6 New Providence, N.J. : R.R. Lasse Ringius focuses instead on the influence of public ideas and policy entrepreneurs. He shows how transnational coalitions of policy entrepreneurs can build environmental regimes and how global environmental nongovernmental organizations can act as catalysts for regime change. This is the first book-length empirical study of the formation of the global ocean dumping regime in 1972 and its subsequent development, which culminated in the 1993 global ban on the dumping of low-level radioactive waste at sea. Ringius describes the structure within which global ocean dumping policy, particularly policy with regard to the disposal of radioactive waste, is embedded. He also examines the political construction of ocean dumping as a global environmental problem, the role of persuasion and communication in an international setting, and the formation of international public opinion. He does not argue that the influence of ideas alone explains how regimes develop, but claims that it is necessary to understand how actors, interests, and ideas together influence regimes and international environmental policy. **Wake of the Wind Dancer From Sea to Shining Sea, by Paddle and Shoe iUniverse** Author retraced the route of several early American explorers, paddling and porting a kayak from Washington State to Florida via the Columbia, Snake, Missouri, Mississippi, Ohio, and Tennessee rivers, and the Florida Intracoastal Waterways, a distance of 5,111 miles, in 202 days, in 1987. **Encyclopedia of American Indian Wars, 1492-1890 W. power to control every aspect of the schooling process in North America, there has been surprisingly little research on the impact of textbook content on students. The contributors of this volume and its partner (*The New Politics of the Textbook: Problematizing the Portrayal of Marginalized Groups in Textbooks*) guide educators, school administrators, academics, and other concerned citizens to unpack the political, social, and cultural influences inherent in the textbooks of core content areas such as math, science, English, and social science. They urge readers to reconsider the role textbooks play in the creation of students' political, social, and moral development and in perpetuating asymmetrical social and economic relationships, where social actors are bestowed unearned privileges and entitlements based upon their race, gender, sexuality, class, religion and linguistic background. Finally, they suggest ways to resist the hegemony of those texts through critical analyses, critical questioning, and critical pedagogies.

By 1921 they were the number four automaker in the nation. By 1932 they were bankrupt. And for Studebaker, one of the most remarkable stories in American automotive history, that was only the beginning. *Studebaker: America's Most Successful Independent Automaker* tells the full and fabulously colorful history of this icon of the American automotive scene. Rife with triumph and tragedy, brilliant moves and boneheaded decisions, Studebaker's decades of building cars makes for a tempestuous saga featuring some of the more interesting characters in the twentieth-century business world. But, above all, the story features cars that, for countless Americans, truly defined driving: not just the Champion, which rocketed the company back to the top in 1939, or the 1950s Raymond Lowey-designed Starliner, deemed a "work of art" by the Museum of Modern Art, but also the Hawks and Larks that so many drivers loved. As the book traces Studebaker's fortunes from success to crisis to merger and back, it also dwells with loving photographic attention on the vehicles, from the first electric car to the last Avanti. **Kentucky Children's Press** An overview of the Bluegrass State, introducing its history, geography, industries, sites of interest, and famous people. **Sea Waifs And Other Poems From Sea to Shining Sea The Holy Cross Brothers in the United States From Sea to Shining Sea [kit].: From sea to shining sea U.S. Employment Service Bulletin**
