## Joseph Smith's Translation

### The Words and Worlds of Early Mormonism

Oxford University Press Mormonism's founder, Joseph Smith, claimed to have translated ancient scriptures. He dictated an American Bible from metal plates reportedly buried by ancient Jews in a nearby hill, and produced an Egyptian "Book of Abraham" derived from funerary papyri he extracted from a collection of mummies he bought from a traveling showman. In addition, he rewrote sections of the King James Version as a "New Translation" of the Bible. Smith and his followers used the term translation to describe the genesis of these English scriptures, which remain canonical for the Church of Jesus Christ of Latter-day Saints. Whether one believes him or not, the discussion has focused on whether Smith's English texts represent literal translations of extant source documents. On closer inspection, though, Smith's translations are far more metaphysical than linguistic. In Joseph Smith's Translation, Samuel Morris Brown argues that these translations express the mystical power of language and scripture to interconnect people across barriers of space and time, especially in the developing Mormon temple liturgy. He shows that Smith was devoted to an ancient metaphysics--especially the principle of correspondence, the concept of "as above, so below"--that provided an infrastructure for bridging the human and the divine as well as for his textual interpretive projects. Joseph Smith's projects of metaphysical translation place Mormonism at the productive edge of the transitions associated with shifts toward "secular modernity." This transition into modern worldviews intensified, complexly, in nineteenth-century

America. The evolving legacies of Reformation and Enlightenment were the sea in which early Mormons swam, says Brown. Smith's translations and the theology that supported them illuminate the power and vulnerability of the Mormon critique of American culture in transition. This complex critique continues to resonate and illuminate to the present day.

## Planning for Creative Change in Mental Health Services

## Global Companies, Local Innovations

### Why the Engineering Aspects of Innovation Making Require Co-location

Routledge Investigating the innovation activities of multinational corporations, this book uncovers and examines why the geography of innovation by multinationals is overwhelmingly local, in spite of their global operations in manufacturing and sales through case studies of product development by three global players: Toyota, Sony, and Canon. The microdynamic approach of the book allows an in-depth investigation of the engineering and technical aspects of innovation making. The book unfolds the complex and constant process of trial and error in innovation and reveals three fundamental natures of innovation making: complexity, interdisciplinarity, and prototyping and testing. In order to manage these three natures of innovation, firms have to plan, ironically, for unplanned situations and to collocate knowledge, people, and resources.
