KEY=REPORT - BAKER IBARRA

Investigation Control and Management System (ICAM) *Investigation, control, and management (ICAM) is a practical operational tool for monitoring and managing the productivity of criminal investigators. This report describes ICAM and its current operation in the Department of Public Safety, Sunnyvale, California that the city has developed and tested the technique. The rationale and the derivation of ICAM is illustrated through the presentation of a conceptual model of the apprehension system, the series of activities which produce information leading to arrest. The system is viewed as an information processing media that acquires, stores, processes, or transmits information that contributes to the systems performance. The flow of apprehension system activities is described and system performance measures and their use are defined and demonstrated. The manuscript describes how the data to operate ICAM is produced from activity reports which are completed by police field personnel. Detailed instructions and coding forms are appended. The ICAM basic performance module, which produces several basic types of management reports, is presented and the uses of the reports are explained. Deficiencies which commonly exist in police reporting systems and which ICAM is designed to overcome are outlined. The ICAM model is demonstrated using thirty example criminal cases. The report concludes with examples which show how ICAM is used to support the typical management sequence of planning, goal setting, the development and selection of alternatives, organizing, controlling and evaluating.* **Simplicity in Safety Investigations A Practitioner's Guide to Applying Safety Science** [Routledge](#) This innovative book aims to bring the science of safety into a simple and practical approach to investigating workplace incidents. As a basis, it uses the ideas of some of the great safety science thinkers of our time. These include Sidney Dekker, Todd Conklin, Erik Hollnagel, Daniel Kahneman, James Reason and Dylan Evans, alongside others and the author's own extensive industry experience. *Simplicity in Safety Investigations: A Practitioner's Guide to Applying Safety Science will better equip readers to deal with incident investigations by helping them understand the science behind investigation techniques, and by exploring coaching and leadership styles that help them ask better questions both before and after workplace incidents. The first two chapters of the book focus on our mindset as we approach and undertake investigations, and the simple things we all must do before an investigation starts. The third chapter is a step-by-step guide on how to undertake both simple and more detailed workplace incident investigations. Chapter 4 is reserved for a more detailed review and set of explanations around the science and thinking behind the method and approach. This book serves as an easy-to-follow, real-world reference for supervisors, managers and safety practitioners across many industries.* **Annual Reports in Medicinal Chemistry** [Academic Press](#) *Annual Reports in Medicinal Chemistry* **Workplace Injury and Disease Recording Standard Just Culture Balancing Safety and Accountability** [Ashgate Publishing, Ltd.](#) While many organizations see the value of creating a just culture they struggle when it comes to developing it. In this Second Edition, Dekker expands his views, additionally tackling the key issue of how justice is created inside organizations. Dekker also introduces new material on ethics and on caring for the 'second victim' (the professional at the centre of the incident). Consequently, we have a natural evolution of the author's ideas. **Cumulated Index Medicus Safety Management A Human Approach Guidance on Investigating and Analysing Human and Organisational Factors Aspects of Incidents and Accidents Biochemical and Biophysical Roles of Cell Surface Molecules** [Springer](#) Cell surface small molecules and macromolecules, such as members of cholesterol family (including steroid hormones), the glycolipid family (sphingolipids), the glycoprotein family (both N-linked and O-linked), and a vast array of other receptors have been shown to be involved in normal and abnormal cellular processes. The 11th International Symposium on Cell Surface Macromolecules, held in Mohali, India, in February 2017 provided a comprehensive update on the major advances in this area. Presenting selected contributions from this meeting, this book comprises 24 chapters, which provide in-depth analyses of data on the role of cell surface macromolecules in cellular function and their alterations associated with pathological conditions. It includes comprehensive research papers and critical overviews of the functional role of cell surface molecules, discussing topics such as biochemical, biophysical, and cell biological approaches to study cell membrane molecules, and metabolism of glycoconjugates. **Normal Accidents Living with High Risk Technologies - Updated Edition** [Princeton University Press](#) Normal Accidents analyzes the social side of technological risk. Charles Perrow argues that the conventional engineering approach to ensuring safety--building in more warnings and safeguards--fails because systems complexity makes failures inevitable. He asserts that typical precautions, by adding to complexity, may help create new categories of accidents. (At Chernobyl, tests of a new safety system helped produce the meltdown and subsequent fire.) By recognizing two dimensions of risk--complex versus linear interactions, and tight versus loose coupling--this book provides a powerful framework for analyzing risks and the organizations that insist we run them. The first edition fulfilled one reviewer's prediction that it "may mark the beginning of accident research." In the new afterword to this edition Perrow reviews the extensive work on the major accidents of the last fifteen years, including Bhopal, Chernobyl, and the Challenger disaster. The new postscript probes what the author considers to be the "quintessential 'Normal Accident'" of our time: the Y2K computer problem. **Handbook of Bioequivalence Testing** [CRC Press](#) As the generic pharmaceutical industry continues to grow and thrive, so does the need to conduct efficient and successful bioequivalence studies. In recent years, there have been significant changes to the statistical models for evaluating bioequivalence, and advances in the analytical technology used to detect drug and metabolite levels have made **Fall Industrial Engineering Conference Non-coding RNAs in the Vasculature** [Springer](#) This book focuses on the importance of regulatory RNAs in the vasculature. The main topics discussed include the role of regRNAs in vascular development and angiogenesis, ischemic cardiovascular disease and repair mechanisms, diabetic and metabolic vascular disease, atherosclerosis and vascular inflammation, as well as diagnostics of vascular disease using circulating miRNAs. Lastly, it offers an overview of emerging topics such as microvesicle-mediated miRNA cellular trafficking and the vascular importance of long non-coding RNAs. It is an invaluable resource for academics, researchers and students working in the field of vascular biology. **Mapping Crime Principle and Practice Human Error** [Cambridge University Press](#) This 1991 book is a major theoretical integration of several previously isolated literatures looking at human error in major accidents. **LOICZ Reports & Studies The Highland Wife** [HarperCollins Australia](#) The Highland air was heavy with revenge, and Mairi MacInnes wanted to breathe deeply of it. Until an arranged marriage with Robert MacBain, an enigmatic lowland lord, whisked her away to a life of adventure, passion-and unspoken love. Generous of spirit. Mighty in battle. Indeed, though he lived in a world of silence, Robert MacBain had gifts any would envy. Yet the Baron of Balcroft lacked true love in his life--until he met and championed Mairi MacInnes, his tempestuous chosen bride. But would she ever hear and heed the loving whispers of his heart? **Safa Sustainability Assessment of Food and Agriculture Systems** [Food and Agriculture Organization](#) The Sustainability Assessment of Food and Agriculture systems (SAFA) Guidelines were developed for assessing the impact of food and agriculture operations on the environment and people. The guiding vision of SAFA is that food and agriculture systems worldwide are characterized by all four dimensions of sustainability: good governance, environmental integrity, economic resilience and social well-being. **Architectural Forensics** [McGraw Hill Professional](#) Successfully Conduct and Report on Any Architectural Forensic Investigation Architectural Forensics clearly defines the role, responsibilities, and essential work of forensic architects. This unique resource offers comprehensive coverage of building defects and failures, types of failure mechanisms, and job-critical tasks such as fieldwork, lab testing, formulating opinions, and providing expert testimony. Packed with 300 illustrations, in-depth case studies, and numerous sample documents, this vital reference takes you step-by-step through every phase of conducting investigations...diagnosing building failures... preventing and curing building defects...and reporting on findings. The book also includes strategies for avoiding liability and resolving disputes-potentially saving vast amounts of time and money. Authoritative and up-to-date, Architectural Forensics Features: • Full details on conducting investigations and reporting on architectural forensics • Clear guidance on preventing and curing building defects and failures • In-depth coverage of field work, photogrammetry, and lab testing • Practical insights into litigation, dispute resolution, and expert testimony • Solid business advice on presentation methods, marketing, and setting up an office and website **Chemistry for Sustainable Development** [Springer Science & Business Media](#) Chemistry for Sustainable Development is a collection of selected papers by the participants of the International Conference on Pure and Applied Chemistry (ICPAC 2010) on the theme of "Chemistry for Sustainable Development" held in Mauritius in July 2010. In light of the significant progresses and challenges in the development and implementation of green and sustainable chemistry, this volume reviews the recent results generated by a more efficient use of resources to minimize carbon footprints, to foster the eradication or minimisation of solvent use in chemistry, and to deliver processes which lead to increased harmony between chemistry and the environment. Chemistry for Sustainable Development is written for graduates, postgraduates, researchers in industry and academia who have an interest in the fields ranging from fundamental to applied chemistry. **Flow Cytometry and Cell Sorting** [Springer Science & Business Media](#) The analysis and sorting of large numbers of cells with a fluorescence-activated cell sorter (FACS) was first achieved some 30 years ago. Since then, this technology has been rapidly developed and is used today in many laboratories. A Springer Lab Manual Review of the First Edition: "This is a most useful volume which will be a welcome addition for personal use and also for laboratories in a wide range of disciplines. Highly recommended." CYTOBIOS **Government Reports Announcements & Index APS Science The Annual Report of the Advanced Photon Source Managing Maintenance Error A Practical Guide** [CRC Press](#) Situations and systems are easier to change than the human condition - particularly when people are well-trained and well-motivated, as they usually are in maintenance organisations. This is a down-to-earth practitioner's guide to managing maintenance error, written in Dr. Reason's highly readable style. It deals with human risks generally and the special human performance problems arising in maintenance, as well as providing an engineer's guide for their understanding and the solution. After reviewing the types of error and violation and the conditions that provoke them, the author sets out the broader picture, illustrated by examples of three system failures. Central to the book is a comprehensive review of error management, followed by chapters on:- managing person, the task and the team; - the workplace and the organization; - creating a safe culture; it is then rounded off and brought together, in such a way as to be readily applicable for those who can make it work, to achieve a greater and more consistent level of safety in maintenance activities. The readership will include maintenance engineering staff and safety officers and all those in responsible roles in critical and systems-reliant environments, including transportation, nuclear and conventional power, extractive and other chemical processing and manufacturing industries and medicine. **Technical Manual DoD Digital Modernization Strategy DoD Information Resource Management Strategic Plan FY19-23** The global threat landscape is constantly evolving and remaining competitive and modernizing our digital environment for great power competition is imperative for the Department of Defense. We must act now to secure our future. This Digital Modernization Strategy is the cornerstone for advancing our digital environment to afford the Joint Force a competitive advantage in the modern battlespace. Our approach is simple. We will increase technological capabilities across the Department and strengthen overall adoption of enterprise systems to expand the competitive space in the digital arena. We will achieve this through four strategic initiatives: innovation for advantage, optimization, resilient cybersecurity, and cultivation of talent. The Digital Modernization Strategy provides a roadmap to support implementation of the National Defense Strategy lines of effort through the lens of cloud, artificial intelligence, command, control and communications and cybersecurity. This approach will enable increased lethality for the joint warfighter, empower new partnerships that will drive mission success, and implement new reforms enacted to improve capabilities across the information enterprise. The strategy also highlights two important elements that will create an enduring and outcome driven strategy. First, it articulates an enterprise view of the future where more common foundational technology is delivered across the DoD Components. Secondly, the strategy

calls for a Management System that drives outcomes through a metric driven approach, tied to new DoD CIO authorities granted by Congress for both technology budgets and standards. As we modernize our digital environment across the Department, we must recognize now more than ever the importance of collaboration with our industry and academic partners. I expect the senior leaders of our Department, the Services, and the Joint Warfighting community to take the intent and guidance in this strategy and drive implementation to achieve results in support of our mission to Defend the Nation. **Covid 19 and Anthony Fauci Dossier** [Independently Published World](#) shocking evidence exposing big pharma and naming names in true crimes against humanity in preventative medicine. This vaccine patent and fraud research book free with limited edition collectible cover artwork by Stan Q. Upjohn. Dossier evidences medical crimes against humanity for financial gain of puppet masters. Dossier by Dr. Martin is fully released under a Creative Commons license CC- BY-NC-SA. For twenty years my company M-CAM has been monitoring possible violations of the 1925 Protocol for the Prohibition of the Use in War of Asphyxiating, Poisonous or other Gases and of Bacteriological Methods of Warfare (the Geneva Protocol) 1972 Convention on the Prohibition of the Development, Production, and Stockpiling of Bacteriological and Toxin Weapons and Their Destruction (the BTWC). In our 2003-2004 Global Technology Assessment: Vector Weaponization M-CAM highlighted China's growing involvement in Polymerase Chain Reaction (PCR) technology with respect to joining the world stage in chimeric construction of viral vectors. Since that time, on a weekly basis, we have monitored the development of research and commercial efforts in this field, including, but not limited to, the research synergies forming between the United States Centers for Disease Control and Prevention (CDC), the National Institutes for Allergies and Infectious Diseases (NIAID), the University of North Carolina at Chapel Hill (UNC), Harvard University, Emory University, Vanderbilt University, Tsinghua University, University of Pennsylvania, many other research institutions, and their commercial affiliations. The National Institute of Health's grant AI23946-08 issued to Dr. Ralph Baric at the University of North Carolina at Chapel Hill (officially classified as affiliated with Dr. Anthony Fauci's NIAID by at least 2003) began the work on synthetically altering the Coronaviridae (the coronavirus family) for the express purpose of general research, pathogenic enhancement, detection, manipulation, and potential therapeutic interventions targeting the same. As early as May 21, 2000, Dr. Baric and UNC sought to patent critical sections of the coronavirus family for their commercial benefit. In one of the several papers derived from work sponsored by this grant, Dr. Baric published what he reported to be the full length cDNA of SARS CoV in which it was clearly stated that SAR CoV was based on a composite of DNA segments. "Using a panel of contiguous cDNAs that span the entire genome, we have assembled a full-length cDNA of the SARS-CoV Urbani strain, and have rescued molecularly cloned SARS viruses (infectious clone SARS-CoV) that contained the expected marker mutations inserted into the component clones." On April 19, 2002 - the Spring before the first SARS outbreak in Asia - Christopher M. Curtis, Boyd Yount, and Ralph Baric filed an application for U.S. Patent 7,279,372 for a method of producing recombinant coronavirus. In the first public record of the claims, they sought to patent a means of producing, "an infectious, replication defective, coronavirus." This work was supported by the NIH grant referenced above and GM63228. In short, the U.S. Department of Health and Human Services was involved in the funding of amplifying the infectious nature of coronavirus between 1999 and 2002 before SARS was ever detected in humans. Against this backdrop, we noted the unusual patent prosecution efforts of the CDC, when on April 25, 2003 they sought to patent the SARS coronavirus isolated from humans that had reportedly transferred to humans during 2002-2003 SARS outbreak in Asia. 35 U.S.C. §101 prohibits patenting nature. This legality did not deter CDC in their efforts. Their application, updated in 2007, ultimately issued as U.S. Patent 7,220,852 and constrained anyone not licensed by their patent from manipulating SARS CoV, developing tests or kits to measure SARS coronavirus in humans or working with their patented virus for therapeutic use. Wake up and read **All Around the Nose Basic Science, Diseases and Surgical Management** [Springer Nature](#) This book is designed to provide all the information required for a sound understanding of diseases of the nose and paranasal sinuses and the surgical techniques used in their management. After an opening section on basic science, clinical and radiological assessment is explained and individual chapters focus on conditions ranging from infectious diseases, allergic rhinitis, and nasal polyposis to trauma, malignancies, and skin diseases. A wide variety of surgical techniques are then described with the aid of high-quality illustrations, covering nasal airway procedures and surgical approaches to the paranasal sinuses, including diverse endoscopic and image-guided procedures, nasal reconstruction, and endonasal and external rhinoplasty. The book is a collaborative project between the new generation of Turkish specialists and well-known experts from across the world. It will be of value for ENT doctors in all countries, as well as for students and trainees and those working in ENT-related fields such as maxillo-facial surgery, pediatrics, allergology, neurology, infectious diseases, and neurosurgery. **Beyond the Roof of the World Music, Prayer, and Healing in the Pamir Mountains** [Oxford University Press](#) While Western medicine has conventionally separated music, science, and religion into distinct entities, traditional cultures throughout the world have always viewed music as a bridge that connects the physical with the spiritual. Now, as people in even the most technologically advanced nations across the globe struggle with obtaining affordable and reliable healthcare coverage, more and more people are turning to these ancient cultural practices of ICAM healing (integrative, complementary, and alternative medicine). With *Beyond the Roof of the World*, Dr. Benjamin D. Koen unearths the Western separation of healing from spiritual and musical practices as a culturally determined phenomenon, and proves the relevance of medical ethnomusicology in light of the globally spreading ICAM healing practices. Using the culture found within the towering Pamir Mountains of Badakhshan Tajikistan, in a place poetically known as the Roof of the World, as the paradigm of ICAM healing, Koen shows spirituality and musicality to be intimately intertwined with one's physical life, health and healing. For the first time, Koen bridges the widespread gap between ethnomusicology and music therapy. Koen's extensive research and emersion into the Badakhstan culture provides the reader with an "insider" perspective while maintaining an "observer's" view, as he infuses the text with relevant scholarship. **Government reports annual index Promising Strategies to Reduce Substance Abuse Index Medicus Simple Tools and Techniques for Enterprise Risk Management** [John Wiley & Sons](#) Your business reputation can take years to build—and mere minutes to destroy The range of business threats is evolving rapidly but your organization can thrive and gain a competitive advantage with your business vision for enterprise risk management. Trends affecting markets—events in the global financial markets, changing technologies, environmental priorities, dependency on intellectual property—all underline how important it is to keep up to speed on the latest financial risk management practices and procedures. This popular book on enterprise risk management has been expanded and updated to include new themes and current trends for today's risk practitioner. It features up-to-date materials on new threats, lessons from the recent financial crisis, and how businesses need to protect themselves in terms of business interruption, security, project and reputational risk management. Project risk management is now a mature discipline with an international standard for its implementation. This book reinforces that project risk management needs to be systematic, but also that it must be embedded to become part of an organization's DNA. This book promotes techniques that will help you implement a methodical and broad approach to risk management. The author is a well-known expert and boasts a wealth of experience in project and enterprise risk management Easy-to-navigate structure breaks down the risk management process into stages to aid implementation Examines the external influences that bring sources of business risk that are beyond your control Provides a handy chapter with tips for commissioning consultants for business risk management services It is a business imperative to have a clear vision for risk management. **Simple Tools and Techniques for Enterprise Risk Management, Second Edition** shows you the way. **Considerations for Viral Disease Eradication Lessons Learned and Future Strategies: Workshop Summary** [National Academies Press](#) Since smallpox eradication, the science of eradication has changed and with it, our definitions of what diseases are possible to eradicate. However, eradication must not beget complacency. As has been learned from past control or eradication attempts with a variety of viral diseases, from yellow fever to influenza, accidental or intentional reintroduction is a real threat -- one that could strike anywhere and for which we need to be fully prepared. The criteria for assessing eradicability of polio, measles, and other viral infections have been debated extensively. With the elimination and eradication of several viral diseases on the horizon, issues surrounding the cessation of immunization activities become exceedingly important. In an effort to better understand the dynamics of disease eradication and post-immunization policies, the Institute of Medicine Forum on Emerging Infections hosted a two-day workshop (February 1--2, 2001) on The Consequences of Viral Disease Eradication. This book explores the principles underlying the biological challenges, medical interventions, the continuing research agenda, and operational considerations for post-immunization strategies for vaccine-preventable viral diseases, and highlights important efforts that may facilitate wise decision making. **Aerospace Medicine and Biology** A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in Scientific and technical aerospace reports (STAR) and International aerospace abstracts (IAA). **Physics Briefs Physikalische Berichte Beyond Transparency Open Data and the Future of Civic Innovation** The rise of open data in the public sector has sparked innovation, driven efficiency, and fueled economic development. While still emerging, we are seeing evidence of the transformative potential of open data in shaping the future of our civic life, and the opportunity to use open data to reimagine the relationship between residents and government, especially at the local level. As we look ahead, what have we learned so far from open data in practice and how we can apply those lessons to realize a more promising future for America's cities and communities? Edited by Brett Goldstein, former Chief Data Officer for the City of Chicago, with Code for America, this book features essays from over twenty of the world's leading experts in a first-of-its-kind instructive anthology about how open data is changing the face of our public institutions. Contributors include: Michael Flowers, Chief Analytics Officer, New York City Beth Blauer, former director of Maryland StateStat Jonathan Feldman, CIO, City of Asheville Tim O'Reilly, founder & CEO, O'Reilly Media Eric Gordon, Director of Engagement Game Lab, Emerson College Beth Niblock, CIO, Louisville Metro Government Ryan & Mike Alfred, Co-Founders, Brightscope Emer Coleman, former director of the London Datastore Mark Headd, Chief Data Officer, City of Philadelphia "As an essential volume for anyone interested in the future of governance, urban policy, design, data-driven policymaking, journalism, or civic engagement, "Beyond Transparency" combines the inspirational glow and political grit of Profiles in Courage with the clarity of an engineer's calm explanation of how something technical actually works. Here are the detailed how-to stories of many members of the first generation of open government pioneers, written in a generous, accessible style; this compilation presents us with a great deal to admire, ample provocation, and wise guidance from a group of remarkable individuals." -Susan Crawford, author of Captive Audience "Just as he did during his time in my administration, Goldstein has brought together industry leaders to discuss issues of relevance in the open data movement and the practical implications of implementing these policies... This book will help continue the work to make open government a reality across the country." - Mayor Rahm Emanuel, City of Chicago "A must-read for anyone who is passionate about what open data can do to transform city living." - Boris Johnson, Mayor of London **Forensic Pathology Reviews Vol 3** [Springer Science & Business Media](#) A collection of cutting-edge accounts of special topics from various fields of forensic pathology and death scene investigation. The authors offer critical insight into the medicolegal investigation of bodies found in water, the forensic aspects of the human immunodeficiency virus (HIV)-1 infection of the central nervous system, deaths in a head-down position, and forensic bitemark analysis. Additional chapters address taphonomic changes in human bodies during the early postmortem interval, arrhythmogenic ventricular dysplasia that produces sudden death in young people, the postmortem diagnosis of death in anaphylaxis, and iatrogenic deaths. The forensic aspects of suicide, murder-suicide, and suicide trends in the United States are also discussed, along with the evaluation of fatal pulmonary thromboembolism and the use of radiology in medicolegal investigations. **TapRoot The System for Root Cause Analysis, Problem Investigation, and Proactive Improvement Innovation and Entrepreneurship Theory, Policy and Practice** [Springer](#) This book aims to meet the needs of education and training in modern techniques of innovation and entrepreneurship, and focuses on the detailed presentation of successful business practices. As today's global economic landscape is changing rapidly, the ability of businesses to introduce new products and services to the market faster than their competitors is perhaps their most distinct competitive advantage. This becomes obvious by the significant market share that the most innovative companies gain while increasing profitability. Extensive research in this field has demonstrated that companies that are constantly innovating normally double their profits compared to others. Moreover, establishing successful practices and policies of innovation management, through which ideas evolve from conception through evaluation to implementation and commercialization, become the basis for economic growth at the firm, industry, national, regional, and global levels. Taking Greece as an example, this volume identifies systemic weaknesses in development of new products, risk capital, patenting, broadband penetration, lifelong training, investment in research on the part of firms, high-tech exports, and employment in medium-high-technology manufacturing that place the country at the bottom of the European Union in economic performance and threaten its potential to achieve sustainable growth. To address these weaknesses in Greece and similar countries around the world, the authors present a comprehensive overview of the principles of innovation and entrepreneurship, with particular respect to their relationships to knowledge, learning, and creativity. Drawing from a strong theoretical foundation, and illustrated through in-depth case studies and examples from both private and public sectors, the authors present a framework for innovation management that integrates research, education, practical application, and policy. Specific topics include technology transfer, intellectual property rights management, the practice of knowledge management intellectual capital investment, business incubators, and Cooperation Research and Development Agreements (CRADAs).
