## Research in Special Education Designs, Methods, and Applications

Charles C Thomas Publisher The primary purpose of this book is to offer a broad-based examination into the role of scientific inquiry in contemporary special education. As with the first two editions, which were published in 2001 and 2011, the goal is to provide a comprehensive overview of the philosophical, ethical, methodological, and analytical fundamentals of social science and educational research. Aspects of special education research that distinguish it from scientific inquiry in other fields of education and human services are specified. Foremost among these distinctions are the research beneficiaries—children with disabilities, their parents, the special educators; availability of federal funds for research and demonstration projects that seek to improve educational outcomes; and the historical, philosophical, and legislative bases for the profession of special education. This new edition represents a revision of more than 30 percent with over 250 new references. Each chapter is thoroughly updated with new developments in research topics, designs, and methods that have emerged over the past decade in the field of special education. This unique book is an excellent resource guide for graduate-level students, practitioners, teachers in the field of special education, disability studies, early intervention, school psychology, and child and family services.

## Implementing a Virtual Coaching Model for Teacher Professional Development

**IGI Global** Over the last two decades, the use of instructional coaching has surged in PreK-12 education settings as one way to support the implementation of instructional best practices in a wide range of disciplines. However, not all educators have access to high-quality instructional coaching due to multiple factors, which typically include isolation (geographic and otherwise), limited financial support, and limited professional development time. In addition, the COVID-19 pandemic brought long periods of quarantine and social isolation where educators were scrambling to teach in an unfamiliar medium, and virtual coaching was the only way they could receive professional development. For these reasons, many districts are exploring virtual solutions to provide professional development and coaching support. *Implementing a Virtual Coaching Model for Teacher Professional Development* addresses how to effectively implement virtual coaching in the field of education and discusses how technology can provide more equitable access to job-embedded and personalized professional learning (through virtual coaching) across all educational institutions. Covering a wide range of topics such as sustainable learning and cognitive coaching, it is ideal for professional development professionals, corporate trainers, education leaders, principals, teachers, researchers, practitioners, academicians, and students.

## Physical Education Teacher Education in a Global Policy Space

**Routledge** This book seeks to focus attention on physical education teacher education (PETE) by building the knowledge base and broadening the geographical, theoretical, and innovative writing about PETE, PETE teacher educators, and those who shape and experience PETE. Teacher competence is a major factor in influencing student learning. Teacher educator competence is also a key factor in preparing high-quality teachers for schools. Therefore, there is a high value in focussing on who teacher educators are and which knowledge bases can inform careful program design as well as pedagogical and assessment strategies around the intended processes of teacher learning. Developed around a framework for studying teacher education, insights into two key elements of teacher education are used to structure the content of this book. Five of the six chapters focus on pedagogies of teacher education, while the last chapter explores the lives of an international cohort of teacher educators and their motives for engagement in research. Based on elements presented and those provided in the framework an agenda exploring pressing issues for

teacher education is posed. This book was originally published as a special issue of Curriculum Studies in Health and Physical Education.

## Artificial Intelligence in Education, 1997

### Knowledge and Media in Learning Systems : Proceedings of AI-ED 97, World Conference on Artificial Intelligence in Education, Kobe, Japan

**IOS Press** The theme of this book is **Knowledge and Media in Learning Systems**, and papers that explore the emerging roles of intelligent multimedia and distributed technologies as well as computer supported collaboration within that theme are included. The spread of topics is very wide encompassing both well- established areas such as student modelling as well as more novel topics such as distributed intelligent tutoring on the World Wide Web. Far from undermining the need to understand how learning and teaching interact, the newer media continue to emphasise the interdependence of these two processes. Collaboration and tools for collaboration are the major topics of interest. Understanding how human learners collaborate, how peer tutoring works and how the computer can play a useful role as either a more able or even a less able learning partner are all explored here.
