## Pedagogical Psychology: Beyond the 21st Century

Frontiers Media SA Frontiers in Psychology is introducing a new research topic, Pedagogical Psychology: Beyond the 21st Century, which will be released as an online journal issue in summer 2014. The purpose of Beyond the 21st Century will be to publish goal-oriented articles leading to improvement of teaching and learning at all levels of psychology education. Until perhaps 20 years ago, educational approaches to teaching were largely informed by a "Stand and Deliver" pedagogical attitude. The psychology of this approach has often invested unrealistic and unrealizable responsibilities in both teachers and students. With the emergence of electronic data sharing (e.g., the Internet) and global cooperation/competition, newer approaches to teaching have begun to supplement and sometimes replace the older model of teaching. These newer approaches have simultaneously taken advantage of technological advances, global changes, and an evolving understanding of successful student-mentor relationships. As the pedagogical models driven by these changes evolve into the 22nd century and beyond, what seems groundbreaking today will, in hindsight, be seen as hidebound. Thus, the major goal of Beyond the 21st Century will be to publish manuscripts which imaginatively, but realistically anticipate future trends in teaching undergraduate psychology. Types of manuscripts which are appropriate for Pedagogical Psychology should be visionary, yet empirically and/or theoretically based. We welcome manuscripts in all domains of pedagogical psychology, with a special interest on topics that are new, or expected to evolve rapidly. Such innovative topics include, but are not limited to: Online and hybrid teaching; Massive Open Online Courses (MOOCs). How has student success improved with the introduction of online/distance education? Are there dangers associated with online/distance education, especially MOOCs? How can student success be improved as technology evolves beyond the MOOC concept? What technological advances will make psychology education available and useful for more, and more diverse students? How can the physical classroom be transformed into a student centered, effective, virtual environment? Using the internet as resources for classes (e.g., stat tutorials, etc.) Uses of technology, such as social media (e.g., Facebook, Twitter), wikis, and clickers in the classroom The challenge of teaching particular courses online, such as psychology laboratory courses or practicums Seeking effective user feedback (i.e., regarding user friendliness, teaching effectiveness) for online courses, including MOOCs The Wikipedia initiative of the Association for Psychological Science Teaching "Generation Me;" anticipating changing generational needs Teaching international students Teaching non-traditional-age students Undergraduate research projects Integrating multiculturalism into all courses Infusing social justice issues into psychology courses Creating opportunities for interdisciplinary learning Teaching techniques for psychology courses which are often offered as electives rather than core curriculum (e.g., evolutionary psychology, psychology and the law, cross-cultural psychology, health psychology, positive psychology) Assessing institutional student learning objectives across the curriculum Contingent faculty/adjunct faculty/lecturers in psychology departments Working with changing legislative & accreditation constraints and unpredictable budgets Co-Hosts of Pedagogy

## Artificial Intelligence in Education

## Building Learning Systems that Care: From Knowledge Representation to Affective Modelling

IOS Press The nature of technology has changed since Artificial Intelligence in Education (AIED) was conceptualised as a research community and Interactive Learning Environments were initially developed. Technology is smaller, more mobile, networked, pervasive and often ubiquitous as well as being provided by the standard desktop PC. This creates the potential for technology supported learning wherever and whenever learners need and want it. However, in order to take advantage of this potential for greater flexibility we need to understand and model learners and the contexts with which they interact in a manner that enables us to design, deploy and evaluate technology to most effectively support learning across multiple locations, subjects and times.

## Handbook for Teaching Introductory Psychology

### Volume II

Psychology Press Like its predecessors, Volume III of the Handbook for Teaching Introductory Psychology provides introductory psychology instructors with teaching ideas and activities that can immediately be put into practice in the classroom. It contains an organized collection of articles from Teaching of Psychology (TOP), the official journal of the Society for the Teaching of Psychology, Division 2 of the American Psychological Association. Volume III contains 89 articles from TOP that have not been included in other volumes. Another distinction between this volume and its predecessors is its emphasis on testing and assessment. The book is divided into two sections. Section One, "Issues and Approaches in Teaching Introductory Psychology," contains 52 articles on critical issues, such as: how to approach the course; understanding students' interests, perceptions, and motives; students' existing knowledge of psychology (including their misconceptions); a comparison of introductory textbooks and tips on how to evaluate them; test questions and student factors affecting exam performance; an overview of different forms of feedback; giving extra credit; and how to deal with academic dishonesty. Section Two consists of 37 articles that present demonstrations, class and laboratory projects, and other techniques to enhance teaching and learning in both the introductory, as well as advanced courses in the discipline. This section is organized so as to parallel the order of topics found in most introductory psychology textbooks. Intended for academicians who teach the introductory psychology course and/or oversee grad assistants who teach the course, all royalties of the book go directly to the Society for the Teaching of Psychology to promote its activities to further improve the teaching of psychology.

The official journal of the Society for the Teaching of Psychology, Division Two of the American Psychological Association, Teaching of Psychology is a highly respected publication devoted to improving teaching and learning at all educational levels. Volume II consists of 99 articles about teaching physiology, perception, learning, memory, and developmental psychology. Divided into eight sections (four devoted to developmental psychology and one for each of the other specialties), the book suggests ways to stimulate interest, promote participation, collect data, structure field experience, and observe and interact with patients.

## Social and Emotional Learning

Routledge Universal school-based social and emotional learning (SEL) interventions seek to improve the social-emotional competencies (e.g. self-awareness, self-management, social awareness, relationship skills, responsible decision-making) of students through explicit instruction in the context of learning environments that are safe, caring, well-managed and participatory. In recent years, SEL has become a dominant orthodoxy in school systems around the world. In this important new book, leading researchers provide a comprehensive overview of the field, including conceptual models of SEL; the assessment of social and emotional competence in children and young people; key issues in the implementation of SEL interventions; the evidence base on the efficacy of SEL in improving students' outcomes; and critical perspectives on the emergence of SEL. It will be essential reading for anyone interested in the role of schools in promoting children's wellbeing. This book was originally published as a special issue of the Cambridge Journal of Education.

## Successful Educational Actions for Inclusion and Social Cohesion in Europe

Springer This monograph analyses and describes successful educational actions with a specific focus on vulnerable groups (i.e. youth, migrants, cultural groups e.g. Roma, women, and people with disabilities). Concrete data that shows success in school performance in subject matters such as math or language will be provided, as well as children, teachers and families accounts of the impact of this success. Alongside, there is an analysis of the relationship between these children's educational performance with their inclusion or exclusion from different areas of society (i.e. housing, health, employment, and social and political participation). Many studies have already diagnosed and described the causes of educational and social exclusion of these vulnerable groups. This monograph, however, provides solutions, that is, actions for success identified through the INCLUD-ED project, thus providing both, contrasted data and solid theoretical background and development. Some examples of these actions are interactive groups (or heterogeneous grouping in the classroom with reorganisation of human resources), extension of the learning time, homework clubs, tutored libraries, family and community educative participation, family education, or dialogic literary gatherings. All these actions have been defined as successful educational actions, which mean that they lead to both efficiency and equity. Finally, recommendations for policy and practice are included and discussed.

## Positive Psychology in Higher Education

Routledge Positive psychology - the scientific study of happiness - is a rapidly burgeoning field, and in no area more so than education. More departments than ever are offering courses in positive psychology, and demand for these courses is consistently high. Graduate programs offering concentrations in positive psychology have appeared at both masters and doctoral level. Educational institutions have expressed interest in using principles of positive psychology to inform institutional structure, faculty development and pedagogy. Positive psychology has been taught and applied in higher education for almost as long as it has existed as a field, but there is little in the way of published literature that brings all of these developments together. The chapters in this volume represent the use of positive psychology at all levels of higher education - from institutional practices and curricular development to pedagogy and the teaching of positive psychology content itself. This book provides an in-depth look at this exciting area of applied positive psychology which will be relevant to educators and administrators alike. This book is based on a special issue of The Journal of Positive Psychology.
