METHODS, STANDARDS, AND WORK DESIGN

Irwin Professional Publishing This tenth edition updates the material of the previous edition so that it corresponds with recent technical changes, though the foremost reason for the revision is to emphasize the importance of ergonomics and work design as parts of methods engineering. The textbook integrates both the traditional elements of motion and time study and the human factors of ergonomics into one book. In this day and age, the industrial engineer needs to consider both the issues of productivity and their effects on the health and safety of the worker simultaneously, something this volume aims to help with through its offering of questions, problems, and sample laboratory exercises and its online provision of forms and information.

STANDARD METHODS FOR THE EXAMINATION OF WATER AND WASTEWATER

"The signature undertaking of the Twenty-Second Edition was clarifying the QC practices necessary to perform the methods in this manual. Section in Part 1000 were rewritten, and detailed QC sections were added in Parts 2000 through 7000. These changes are a direct and necessary result of the mandate to stay abreast of regulatory requirements and a policy intended to clarify the QC steps considered to be an integral part of each test method. Additional QC steps were added to almost half of the sections."--Pref. p. iv.

STANDARD METHODS FOR THERMAL COMFORT ASSESSMENT OF CLOTHING

CRC Press Providing detailed analysis of the thermal comfort assessment of clothing as the basis for developing standards, this book discusses the thermal protective role of clothing as a way of modelling heat transfer from the body, general thermal regulation of humans, and the importance of globally accepted test methods and standards to improve quality. New materials and discoveries in the study of thermal comfort necessitate the need for standard improvements and update. The development of international standards and the unification of testing methods is of crucial significance to ensure cost reduction and health protection. The book promotes instruments, methods, implementation of unified specifications, and the definition of standards so that a clear quality management system can be established, for both production systems and testing methods. It discusses standards in ergonomics of the thermal environment, clothing thermal characteristics, and subjective assessment of thermal comfort, which allows for systematic control of the measuring methods and the services and final products that are distributed on the global market. This book is aimed at industry professionals, researchers, and advanced students working in textile and clothing engineering, comfort testing, and ergonomics.

STANDARD METHODS OF CLINICAL CHEMISTRY

BY THE AMERICAN ASSOCIATION OF CLINICAL CHEMISTS

Elsevier Standard Methods of Clinical Chemistry, Volume II describes accurate and workable methods used in clinical laboratories. This 21-chapter text covers the principles, reagents, procedure, and calculation of these methods. The opening chapters explore various clinical chemistry methods for determination of serum calcium, cholesterol, chloride, fatty acids, gamma globulin, and hemoglobin. The succeeding chapters review the methods for detection of free and conjugated 17-hydroxycorticosteroids, 17-ketosteroids, serum iron, lipase, nitrogen by Kjeldahl method, and nonprotein nitrogen. The remaining chapters deal with other clinical methods for blood pH, enzyme, phosphatides, urine porphyrins, protein-bound ion, and sulfobromophthalein determination. This book is directed primarily toward clinical chemists, but pathologists, medical technicians, clinical investigators, chemists in other fields, and students will find this book rewarding.

STANDARD METHODS OF CLINICAL CHEMISTRY

BY THE AMERICAN ASSOCIATION OF CLINICAL CHEMISTS

Elsevier Standard Methods of Clinical Chemistry, Volume 7 presents the methods to determine how an automated or radioisotope procedure can be best studied and evaluated. This book deals with subjects on control systems and standardization that are essential for effective operation of any clinical chemistry laboratory. Organized into seven parts encompassing 23 chapters, this volume begins with an overview of the technical aspects of the muramidase assay and its usefulness in the diagnosis of a variety of hematologic and renal disorders. This text then examines the use of olive oil as a substrate for measuring lipase activity. Other chapters consider the increased interest in the relationship of serum lipid fractions to coronary artery disease and the hyperlipoproteinemias. This book discusses as well the manual method for determination of serum iron. The final chapter deals with precipitating antigen-antibody systems used in diverse areas as immunology, microbiology, biochemistry, and forensic medicine. This book is a valuable resource for clinical chemists.

ETHNOMETHODOLOGY AT WORK

Routledge Bringing together one of the most important bodies of research into people's working practices, this volume outlines the specific character of the ethnomethodological approach to work, providing an introduction to the key conceptual resources ethnomethodology has drawn upon in its studies, and a set of substantive chapters that examine how people work from a foundational perspective. With contributions from leading experts in the field, including Graham Button, John Hughes and Wes Sharrock, Ethnomethodology at Work explores the contribution that ethnomethodological studies continue to make to our understanding of the ways in which people actually accomplish work from day to day. As such, it will appeal not only to those working in the areas of ethnomethodology and conversation analysis, but also to those with interests in the sociology of work and organisations.

STANDARD SOIL METHODS FOR LONG-TERM ECOLOGICAL RESEARCH

Oxford University Press Standardized methods and measurements are crucial for ecological research, particularly in long-term ecological studies where the projects are by nature collaborative and where it can be difficult to distinguish signs of environmental change from the effects of differing methodologies. This second volume in the Long-Term Ecological Research (LTER) Network Series addresses these issues directly by providing a comprehensive standardized set of protocols for measuring soil properties. The goal of the volume is to facilitate cross-site synthesis and evaluation of ecosystem processes. Chapters cover methods for studying physical and chemical properties of soils, soil biological properties, and soil organisms, and they include work from many leaders in the field. The book is the first broadly based compendium of standardized soil measurement methods and will be an invaluable resource for ecologists, agronomists, and soil scientists.
